

Accident Investigation

This one-day accident investigation training workshop will enable delegates to identify the root causes of accidents and make quality recommendations to prevent recurrences. Thorough investigation into any workplace accident is necessary to help prevent recurrences and to demonstrate to enforcement authorities and others that appropriate remedial action has been or is being taken.

In addition to being able to identify the root causes of accidents and make quality recommendations to prevent recurrences, it also explores interviewing techniques and reporting requirements.

Who should attend the Accident Investigation course?

This course will be valuable for health and safety advisers/officers, safety representatives, managers, supervisors, or anyone with responsibility for investigating accidents. The topics covered on this accident investigation training course can be applied to any sector.
